

*Conference Suite, MIT Research Lab for Electronics*

Flexibility was a key goal for this reconfiguration of and renovation of a conference suite.

As a single space, the room can accommodate 80 chairs. A ceiling-hung movable partition (partially closed in the photograph) allows subdivision into two acoustically separate spaces – each of which has whiteboards, independent lighting controls and a separate audio-visual system.

An adjacent kitchen is located to serve both rooms, and closets allow for storage of excess furniture.

*Completed Summer 2004.*
