

*Egress and Access Improvements, Weld Boathouse, Harvard Athletics*

In response to a request by the building inspector, we created a second means of egress from the upper floor of the Weld Boathouse, by inserting a stair concealed within the previously inaccessible eaves under the sloping roof. The cost of this work triggered requirements to add a wheelchair-accessible entrance and bathroom. We also reconstructed the deteriorated concrete kneewalls flanking the entrance. Soft soils near the river necessitated an elaborate foundation system for the wheelchair ramp.
